

Signing Electronically with EscrowTab

➤ **Secured & Reliable**

The tablet used in our signings is an isolated platform that only has access to the EscrowTab system, which means there is no opportunity for viruses to be downloaded and violate the system's security.

➤ **Legally Accepted & Binding**

The courts have recognized that electronically signed documents are as valid as 'wet signatures' (ink on paper).

➤ **Forensically Verifiable Signature through Biometrics**

In fact, biometric signature capture is even more secure due to the electronic recording of biometric metadata including pressure, strokes, and individual points.

➤ **Saves Time and Money**

Typically, all documents are prepared electronically, then printed, signed, and scanned back in to be stored electronically. With EscrowTab, it is entirely electronic, removing the printing step completely by providing a secure platform to sign electronically instead of ink on paper; streamlining the closing process, and saving paper as well.

**Clients may request a paper copy of their signed documents.
